

118 SERIES

Glazed interior aluminium partitions with openings

Indoor Factory® is a complete aluminium profile system without thermal breaks, designed for the manufacture of custom interior fixed glass partitions. A trend-setting product, the Indoor Factory® interior glass partition is a decidedly decorative solution that makes it possible to create new interior spaces by combining fixed and opening (hinged, pivoting or sliding doors) glass partitions, all in an industrial, «artist's workshop» spirit.

STRAIGHT CUT DESIGN

FRAME

Tubular, W 36 x D 21 mm

INDOOR FACTORY

118 SERIES Glazed interior aluminium partitions with openings

FIXED GLASS PARTITIONS

Indoor Factory® glass partitions can be used to create elegant and stylish separations, while providing an optimal acoustic barrier and natural light. The intermediate rails assembled on the frame are freely positionable: horizontally or vertically. Indoor Factory® interior glass partitions allow 90° angles and the integration of hinged, sliding, or pivoting doors for a total partitioning of spaces.

SWING DOOR

Fitted with key locks to guarantee the security of the spaces, swing doors can be equipped with intermediate rails to give an industrial look or left bare for a pure and simple design.

SLIDING DOOR

The sliding door system is a real space saver because it does not need to take into account an angle of rotation. Two options of mounting rails are available in black anodized:

- The rail with concealed wall mounting offers a simple, modern design and has a silent, low-lock opening and closing system
- With visible fittings and runners, the second track system offers a decidedly industrial design

PIVOT DOOR

Easy to use and very aesthetically pleasing, the pivoting door offers a rotation system integrated into the interior profile which greatly facilitates its installation. No work needs to be done on the ground! The doors can be pivoted in both directions with a holding position at 0° or 90°. There is a choice of a floating pivot door or a pivot door with a frame to optimise acoustic comfort.
